

Ghost

OUT OF SIGHT ... BUT NOT OUT OF REACH

Electronic Accelerator Ring

The Ghost is an innovative and revolutionary accelerating system mounted directly underneath the steering wheel. The Ghost allows the user to accelerate by simply performing a natural rotary (clockwise/anti-clockwise) movement.

Both hands remain on the wheel meaning greater control of the vehicle and access to accessories. The unique patented design of the Ghost renders the device unobtrusive to the point that it is almost invisible.

- Accompanied by PME's custom brake grip which contours to the vehicles outer radius of the steering wheel, giving you the ultimate palm on and off style braking and more two hands on the wheel driving experience
- The system operates via a dedicated programmable CPU that directly interfaces with the vehicle's existing drive-by-wire accelerator system. This translates into fluid and responsive acceleration unmatched by other mechanical-type hand controls
- Secured to the wheel with four discrete interlocking straps
- Designed with attention to detail and manufactured using high quality components
- Relax while driving using the smooth and responsive action of the Ghost ring
- Can be fitted to a wide range of vehicles including high performance vehicles such as rally/race cars
- Interchangeable from vehicle to vehicle
- Can easily be switched between 2 driving modes, City and Sport, to suit the desired rate of acceleration in any driving conditions
- Interfaces with PME Knee Airbag Compatible Systems
- *If you have driven with conventional type hand controls you will definitely not be disappointed with the latest technology Ghost electronic accelerator ring system. Contact PME today.*

In working partnership with Guidosimplex and with combined experience of 70 years PME bring you the best solutions available worldwide
