

DUCK CLUTCH

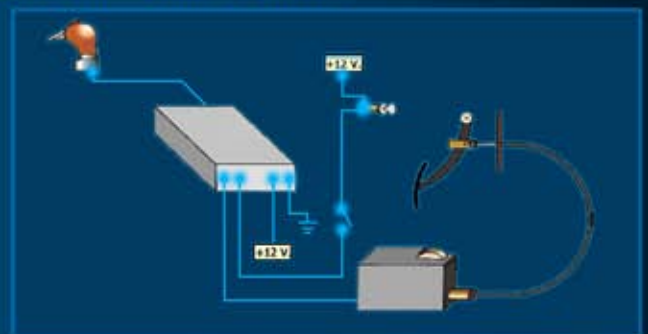

Electronic Clutch Control

The Electronic DUCK CLUTCH modification is for use by drivers who prefer the control offered by a manual transmission but have difficulty operating the clutch pedal.

The Device provides the driver with fingertip control of the clutch, removing the need for use of the left leg to perform gear changes.

- Suitable for amputees or paraplegics, among others, especially in the case where an automatic model of a vehicle is not available.
- Driving 'Stick' Is Your Choice; mounting the DUCK CLUTCH on the gear stick allows the driver to operate the clutch and make smooth gear changes with the left hand.
- Incorporates a finger operated aluminum trigger to control the clutch, with the pedal moving proportionally.
- Smart Technology for Individualised Control; control can be individualized to the user's driving technique, even to suit requirements of high performance race cars.
- A computer determines the location of the 'friction point' and automatically finds it when the trigger is released slightly.
- To allow for conventional operation of the clutch, the electronic clutch can be disabled and re-enabled at any time using a switch on the dashboard.
- Available in either treated wood or leather, the DUCK CLUTCH blends into your vehicle's interior perfectly
